## Introduction

Appraisals for assessment purposes are, of necessity, made on a mass basis. The task of assessing large numbers of individual parcels of real estate within a relatively short period of time has resulted in the refinement of traditional appraisal techniques to fit the realities of mass appraisal. However, the basic principles of real estate appraisal still apply. Thus, mass appraisal methods rest on the same technical and theoretical foundations as more traditional appraisal techniques. The three approaches to value--*cost, income, and sales comparison*--are the same for both mass and individual appraisals, the techniques or methods employed to complete the approaches, although, are often different for the mass appraisal for all properties within a county. It should also be pointed out that, although the Assessor's techniques are designed for mass appraisal, the resulting values constitute accurate and uniform individual appraisals of each property.

All appraisal techniques and valuations for the 2021 reappraisal are to be completed in compliance with applicable North Carolina General Statutes. N. C. General Statutes 105-283 and 105-317 require that the basis for valuation be an estimate of market value arrived at through the uniform application of valuation schedules, rules, and standards. The County-wide reappraisal, effective January 1, 2021, will utilize a computer-assisted mass appraisal, or CAMA system that is part of the NCPTS software system in agreement with the North Carolina Association of County Commissioners. The computerized storage of data, automated valuation calculation abilities, and reporting capabilities of the CAMA system aids the County's appraisers in analyzing and modifying appraisal data in accordance with the changing economic forces which control the market for real property. The CAMA system features an automated cost approach that produces values depending on the characteristics of the property and that are derived from the cost data contained in this *Schedule of Values, Standards, and Rules*.

A major component of the County's CAMA system is its sales module that captures valid, arm's length, open-market sales and the data or characteristics of each sale parcel. This record that reflects the condition and characteristics of a parcel at the time of the sale is known as a "sale record". "Sale records" are editable individually, through mass update, and are appraised like all other market area parcels by the CAMA system. Adjustments for market conditions (time) are applied by the CAMA system updating sale price amounts to a January 1, 2021 level to reflect value changes since the date of the sale. Through analysis of the "sale record" valuations and the trended sales prices, the appraiser can consider the qualified (valid) sales in each market area when establishing the new valuations. The CAMA system reports statistics such as sales ratios, price per square foot, COD, and PRD. The statistics reported by the CAMA system allow the appraisers to produce results that are accurate and consistent (fair and equitable). Assessment ratios compare the trended sale prices to the assessed valuations and are the major tool in measuring the accuracy of the valuations. Thus, the "Sale records" and resulting trended market sale prices are the foundation of the reappraisal values.

The CAMA system can generate valuations from the sales approach using direct comparable sales for residential properties. The County considers the information that is available within each market area and applies the appropriate cost or sales comparison approach based on the available data. The comparable sale approach may be used for individual properties or applied

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

en masse to full market areas. Thus, assessed values, where supported, may be derived by the sale comparison or market approach, through directly adjusting individual comparable sales to a subject property.

The income approach may be applied to property classes that are typically valued using income in the market. The values are based on the characteristics of each property using data from the market. The market information along with the appropriate characteristics of the property are retained in the income and expense module of the CAMA system. The income approach considers the economic factors of the market as they apply to a property, capitalizing an appropriate income for the property to derive an indicated value.

For greater accuracy and for more efficient use of available personnel and computer resources, most of the County has been divided into homogeneous groupings called “*appraisal market areas*”, with the remaining area classified as rural “*catchall market areas*”. Appraisal market areas are groups of parcels with similar uses and that are subject to similar economic forces. The use of appraisal market areas permits realistic analysis since they consist of market-determined groupings in defined locations which lend themselves to computer-aided mass appraisal analysis. Forsyth County’s computerized geographic information, GIS system, provides both graphic and non-graphic information on market area maps to also facilitate appraisal analysis.

Each property in Forsyth County is reviewed during the field review stage of the reappraisal. All parcels except those in catchall areas are viewed by the appraisal staff. The assessment data is checked for accuracy and a digital image is taken of all improvements if not previously captured. A GIS location point is linked to the image and property address. This process provides field verification of parcel data. It also yields an excellent set of tools for market area and parcel valuation as well as quality control.

The computer-assisted mass appraisal, CAMA system, permits analysis of the 1,419 market areas and rural catchall market areas throughout the County, utilizing the market information from over **20,000 qualified arm’s length** open market real estate transactions occurring in 2017, 2018, 2019, and 2020. As an aid to value at 100% of market value, the CAMA system also contains the ability to adjust residential improvement values by the use of a “market area factor”. The “market area factor” is a multiplier used on a market area-wide basis that adjusts the calculated residential improvement values, in one percent increments. Thus, in analyzing a market area’s sales ratio report, the appraiser may adjust the values in the market area by the use of a “market area factor” to reach current market value of January 1, 2021.

Even with the help of computers, the appraisal of a parcel of real estate involves a series of actions, procedures, and decisions, most of which require some degree of training and judgment. The more that this judgment is based on a standardized system of gathering, analyzing, weighing, and applying factors and schedules of value, the more uniform will be the final assessment. Therefore, this document serves as a source of information and a guide to standard procedures and uniform methods of appraising real property in order to secure more accurate and equitable assessments of real property in Forsyth County.

## Sales Ratio Studies

North Carolina General Statute 105-289(h) requires counties to perform annual studies of the ratio of assessed value of real estate to its sale price. This is known as a sales ratio study. A sales ratio is simply the assessed value of a property divided by its sales price. For example, if a property sells for \$100,000 and its assessed value is \$90,000, the ratio is 90%. Sales ratio studies thus determine the level of assessment.

Various other statistical measures are tracked by the Tax Administration Office and are reported and reviewed regarding the uniformity and equity of the assessed values. In order to ensure the accuracy of the studies and reported statistics, it is necessary to verify that a transfer of real estate and its sale price meet the definition of a valid market value transaction. All sales are analyzed to determine if they are arms-length transactions between willing and financially able buyers and willing sellers, with neither being under any compulsion to buy or sell (NC G.S. 105-283). *The codes identifying non-qualifying sales are defined in the NCDOR DEED EDIT SHEET located on page 4 of this document.* If a sale fails to meet the definition of a valid market value sale for any reason, it is not utilized in the sales ratio study report under NC 105-289(h).

### Distressed and Forced Sales

The Forsyth County real estate market has continued to experience some forced or distressed sales over the past several years. For the 2021 Reappraisal, the County has identified and considered sales after foreclosure auctions from lenders. The County also considers ‘short sales’, which are defined as sales transactions at prices below the mortgage balance not involving a financial institution. Short sales are transacted to avoid a court ordered foreclosure action. These sales may play a role in the general direction observed in the average selling price of existing homes in some areas since the last reappraisal.

While ‘distressed’ and ‘forced sales’ have occurred in different areas of the County, some areas have been more heavily impacted than others. Staff appraisers will consider all sales that have occurred in each appraisal market area since January 1, 2017, but the greatest weight will be given to comparable sales that have happened **without** duress.

### Outliers and Trimming

Outliers are defined in the IAAO publication *Standard on Ratio Studies* as:

“Observations that have unusual values, that is, differ markedly from a measure of central tendency. Some outliers occur naturally; others are due to data errors.”

In the final analysis of sales ratios produced during the 2021 revaluation, the County will employ standard statistical trimming techniques as described in the IAAO *Standard on Ratio Studies* to remove outliers. Outliers are first identified and then trimmed, or removed, so that queuing errors are not created, producing erroneous results in the reporting of statistics.

## Types of Invalid Sales as defined by the North Carolina Department of Revenue

### NCDOR DEED EDIT SHEET

#### CODE REASONS FOR REJECTION:

- A. The transaction includes the conveyance of two (2) or more parcels.
- B. Sales for which the improvements sold are not included in the tax assessment or the assessment included improvements built after the sale.
- C. Deed shows \$6.00\* or less in revenue stamps. \*Transaction is for \$3,000 or less.
- D. The date the deed was made, entered or notarized is outside the dates of the study period.  
(The study period runs from January 1 to December 31.)
- E. The transaction is between relatives or related businesses.
- F. The grantor is only conveying an undivided or fractional interest to the grantee.
- G. The deed reserves until the grantor, a life estate or some other interest.
- H. The deed reserves unto the grantor the possession of, or lease of, the property for specified period following the sale.
- I. One or both of the parties involved in the transaction is governmental, a public utility, lending institution, or relocation firm.
- J. The deed conveys a cemetery lot or other tax-exempt property.
- K. One or both of the parties involved in the transaction is a church, school, lodge, or some other educational organization.
- M. The deed indicates that the property conveyed is situated in more than one county.
- N. The transaction is for minerals, timber, etc. or the rights to mine or cut same.
- O. The transaction includes the conveyance of personal property, and the value of such is not specified separate from the real property value in the deed.
- P. The transaction is the result of a forced sale or auction. (Includes items 1 & 2 Below)
- Q. Transaction made by the use of a Contract for Deed, the agreement for which is executed and sale actually made prior to the study.
- R. The transaction involves the trade or exchange of real property.
- S. The transaction is for real property, which cannot be clearly identified on the county tax records.
- T. Non-General Warranty Deed
- X. Other (An explanation must be provided when this code is used.)

#### FORECLOSURE IDENTIFICATION (Unique to Forsyth County)

- 1. Forced Capture: Taking by a lender. (Subset of “P” above.)
- 2. Forced Disposition: Sale by lender to a new owner. (Subset of “P” above.)

## **Standards for Appraisal and Assessment**

### **G.S. 105-283. Uniform appraisal standards.**

All property, real and personal, shall as far as practicable be appraised or valued at its true value in money. When used in this Subchapter, the words “true value” shall be interpreted as meaning market value, that is, the price estimated in terms of money at which the property would change hands between a willing and financially able buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of all the uses to which the property is adapted and for which it is capable of being used. For the purposes of this section, the acquisition of an interest in land by an entity having the power of eminent domain with respect to the interest acquired shall not be considered competent evidence of the true value in money of comparable land. (1939, c. 310, s. 500; 1953, c. 970, s. 5; 1955, c. 1100, s. 2; 1959, c. 682; 1967, c. 892, s. 7; 1969, c. 945, s. 1; 1971, c. 806, s. 1; 1973, c. 695, s. 11; 1977, 2nd Sess., c. 1297.)

---

The Forsyth County Tax Administration Office utilizes assessment ratio analysis to ensure reappraisals reflect market value as of the assessment date and are equitable and uniform as well. The assessment ratio standards for this office meet and/or exceed those found in the 2013 *Standard on Ratio Studies* by the International Association of Assessing Officers. Assuming that an adequate number of sales exists within a given market area, the standards used by the Forsyth County Assessor’s Office are as follows:

- (a) The median level of assessment county-wide shall be within 10% of the legal level; i.e., not lower than 90% and no more than 110%.
- (b) Each market area as far as practical shall have a median level of assessment within 10% of the legal level; i.e., not lower than 90% and no more than 110%.
- (c) Coefficients of Dispersion (COD’s) as far as practical shall be:
  - (1) 20% or less in rural areas
  - (2) 15% or less for single family residences
  - (3) 10% or less for newer and fairly homogeneous single-family residences
  - (4) 20% or less for income-producing improved properties
  - (5) 25% or less on vacant land
- (d) The price-related differential as far as practical shall be between .98 and 1.03.

## **Administration of Real and Personal Property Appraisal**

### **G.S. 105-317. Appraisal of real property; adoption of schedules, standards, and rules.**

- (a) Whenever any real property is appraised it shall be the duty of the persons making appraisals:
  - (1) In determining the true value of land, to consider as to each tract, parcel, or lot separately listed at least its advantages and disadvantages as to location; zoning; quality of soil; waterpower; water privileges; dedication as a nature preserve; conservation or preservation agreements; mineral, quarry, or other valuable deposits; fertility; adaptability for agricultural, timber-producing, commercial, industrial, or other uses; past income; probable future income; and any other factors that may affect its value except growing crops of a seasonal or annual nature.
  - (2) In determining the true value of a building or other improvement, to consider at least its location; type of construction; age; replacement cost; cost; adaptability for residence, commercial, industrial, or other uses; past income; probable future income; and any other factors that may affect its value.
  - (3) To appraise partially completed buildings in accordance with the degree of completion on January 1.
- (b) In preparation for each revaluation of real property required by G.S. 105-286, it shall be the duty of the assessor to see that:
  - (1) Uniform schedules of values, standards, and rules to be used in appraising real property at its true value and at its present-use value are prepared and are sufficiently detailed to enable those making appraisals to adhere to them in appraising real property.
  - (2) Repealed by Session Laws 1981, c. 678, s.1.
  - (3) A separate property record be prepared for each tract, parcel, lot, or group of contiguous lots, which record shall show the information required for compliance with the provision of G.S. 105-309 insofar as they deal with real property, as well as that required by this section. (The purpose of this subdivision is to require that individual property records be maintained in sufficient detail to enable property owners to ascertain the method, rules, and standards of value by which property is appraised.)
  - (4) The property characteristics considered in appraising each lot, parcel, tract, building, structure and improvement, in accordance with the schedules of values, standards, and rules, be accurately recorded on the appropriate property record.
  - (5) Upon the request of the owner, the board of equalization and review, or the board of county commissioners, any particular lot, parcel, tract, building, structure or improvement be actually visited and observed to verify the accuracy of property characteristics on record for that property.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

- (6) Each lot, parcel, tract, building, structure and improvement be separately appraised by a competent appraiser, either one appointed under the provisions of G.S. 105-296 or one employed under the provisions of G.S. 105-299.
  - (7) Notice is given in writing to the owner that he is entitled to have an actual visitation and observation of his property to verify the accuracy of property characteristics on record for that property.
- (c) The values, standards, and rules required by subdivision (b)(1) shall be reviewed and approved by the board of county commissioners before January 1 of the year they are applied. The board of county commissioners may approve the schedules of values, standards, and rules to be used in appraising real property at its true value and at its present-use value either separately or simultaneously. Notice of the receipt and adoption by the board of county commissioners of either or both the true value and present-use value schedules, standards, and rules, and notice of a property owner's right to comment on and contest the schedules, standards, and rules shall be given as follows:
- (1) The assessor shall submit the proposed schedules, standards, and rules to the board of county commissioners not less than 21 days before the meeting at which they will be considered by the board. On the same day that they are submitted to the board for its consideration, the assessor shall file a copy of the proposed schedules, standards, and rules in his office where they shall remain available for public inspection.
  - (2) Upon receipt of the proposed schedules, standards, and rules, the board of commissioners shall publish a statement in a newspaper having general circulation in the county stating:
    - (a) That the proposed schedules, standards, and rules to be used in appraising real property in the county have been submitted to the board of county commissioners and are available for public inspection in the assessor's office; and
    - (b) The time and place of a public hearing on the proposed schedules, standards, and rules that shall be held by the board of county commissioners at least seven days before adopting the final schedules, standards, and rules.
  - (3) When the board of county commissioners approves the final schedules, standards, and rules, it shall issue an order adopting them. Notice of this order shall be published once a week for four successive weeks in a newspaper having general circulation in the county, with the last publication being not less than seven days before the last day for challenging the validity of the schedules, standards, and rules by appeal to the Property Tax Commission. The notice shall state:
    - (a) That the schedules, standards, and rules to be used in the next scheduled reappraisal of real property in the county have been adopted and are open to examination in the office of the assessor; and
    - (b) That a property owner who asserts that the schedules, standards, and rules are invalid may except to the order and appeal therefrom to the Property Tax Commission within 30 days of the date when the notice of the order adopting the schedules, standards, and rules was first published.
- (d) Before the board of county commissioners adopts the schedules of values, standards, and rules, the assessor may collect data needed to apply the schedules, standards, and

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

rules to each parcel in the county. (1939, c. 310, s. 501; 1959, c. 704, s. 4; 1967, c. 944; 1971, c. 806, s. 1; 1973, c. 476, s. 193; c. 695, s. 5; 1981, c. 224; c. 678, s.1; 1985, c. 216, s. 2; c. 628, s. 4; 1987, c. 45, s. 1; c. 295, s. 1; 1997-226, s. 5.)

## **Base Specifications for all Grades of Single-Family Dwellings**

The Base Area of a single-family residence is calculated from exterior measurements of the dwelling. Each dimension is rounded to the nearest whole foot. This dwelling base includes the following items regardless of the quality grade of the dwelling:

- ❖ Footings and foundation (no basement), the exterior walls, floor structure, and roof structure.
- ❖ Finished floors or carpeting, finished ceilings, and walls (both the interior of the exterior walls and the interior partition walls).
- ❖ Electrical service to the structure, wiring, lighting fixtures, and electrical outlets.
- ❖ Plumbing system which includes a single three-fixture bath, one water heater, and one kitchen sink.
- ❖ Central heating (with ductwork or some means other than a fan to distribute the heated air) is included in the base value of the dwelling, for example: solar, forced warm air, wood furnace, steam, hot water, and electric baseboard/ceiling. A deduction is made when there is no heat (NONE), and a smaller deduction is made for a wall or floor furnace (WALL/FLR FURNACE) which depends on gravity for air distribution. Air conditioning is *not* included in the base cost of the dwelling.

## **Quality Grading – Residential Structures**

Both materials and workmanship are fundamental to a determination of the overall quality of construction of a dwelling. While the quality of individual building components may vary, the combinations of all the elements will determine the overall quality of the residence.

Exterior observations chiefly used for judgments on quality are wall design and finishes, window replacement, type and design as well as roof type, design and slope. Interior workmanship is normally observable in level or plumb surfaces, smoothly-finished mitered joints, and properly-fitted components. The quality and quantity of materials used is normally apparent upon inspection. The grade of wood, floor coverings, fixtures, etc., are primary indications of quality. *(It should be noted that Forsyth County does not typically have access to the interior of private residences. Decisions regarding the interior of these dwellings are made based on exterior inspection, information from the builder or developer permits and listing information.)* Finally, the overall design of the dwelling, including the number and type of items appurtenant to or within the structure, contribute to the quality of the dwelling as a whole.

Materials, workmanship, design, and appurtenances contribute to the cost of the structure. It is the task of the field appraiser to describe and to grade a dwelling so that the resultant assessment calculated from their information reflects the market value of the property as indicated by transactions involving similar properties in the residential market place.

### **Quality Grade Guides**

The quality guides outlined for each grade of the dwellings described in the following pages assist the field appraiser in determining an appropriate quality grade for each dwelling. These guides describe the materials used, construction, workmanship, design, and overall appearance of each type. Photographic illustrations are provided for each of the alphabetic grades from HA (the highest) to E (the lowest). In addition, field appraisers may make plus or minus adjustments in quality grades. This adjustment provision within the grade scale permits the appraiser to define accurately existing quality differences between dwellings of very similar quality.

Where there is a mixture of quality grades, predominant quality characteristics should be given the most weight in arriving at an appropriate grade selection.

For additional information, refer to the *Dwelling Grade Table*.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

**Note:** These quality grade guides apply equally well to modular homes which are fabricated in factories to meet the requirements of the North Carolina Building Code just like site-built homes. The quality grade guides, however, do *not* apply to manufactured housing fabricated in factories to meet the lesser requirements of the Federal Housing and Urban Development (HUD) Code. Because of system limitations, three designations of stick-built homes (D, D-20, and E+10) are also used to represent three distinct grades of manufactured housing meeting the four basic legal requirements of real property:

1. It must be a residential unit.
2. It must have the moving hitch, wheels and axles removed.
3. It must be placed on a permanent foundation.
4. It must be placed on land owned by the owner of the unit.

Photographs of the three grades of manufactured housing are provided at the end of the Quality Grade Guides section.

## **GRADE HA DWELLINGS**

This quality of residence may be referred to as extremely high cost, unique construction. Thus, it is difficult to isolate any one physical characteristic of this grade. Typically, the best of all types of materials available from domestic and foreign sources are used in construction. The design workmanship will normally be of superior and unique quality. There will be many special features and built-ins not commonly found in other homes. The total living area will usually be larger in this grade with very generous room sizes, halls, closets, storage space, and recreation rooms. The quality of hardware, lighting fixtures, and plumbing fixtures will be of superior quality for its time. Ornate and decorative design will normally be evident in such things as trim, doors, windows, and cabinets.

This grade of house is of special design, and consequently its construction is supervised closely by an architect. This grade house is built to rigid specifications of the owner.

**GRADE HA DWELLINGS**

## GRADE AA DWELLINGS

This is a very high-grade residence combining some of the special materials found in grade HA residences with some of the best grade of materials normally carried as stock items by building supply houses. Workmanship is of very high, somewhat unique quality throughout.

The quality of hardware, lighting fixtures, and plumbing fixtures will be of the highest-grade custom or stock items with a few special items such as elaborate fireplace facings or intercom systems, special bathroom fixtures or facings, or other special features which are uncommon in good standard residential construction. In most instances, there will be numerous special features and built-ins over and above those found in the good grade houses but less elaborate in quality or quantity than those found in HA grade residences.

This type of residence is of custom design with some ornamentation and special effects evident in both the interior and exterior appointments. It has an above average number of good grade closets and storage areas of ample size. Appointments and features are a combination of the most expensive and upper range of the good grade residences.

In the practical application of quality grading, the appraiser will often encounter materials and workmanship which are found in the HA grade, the AA grade, and the A grade dwellings. Where there is a mixture of quality grades, the predominant quality characteristic should be given the most weight in arriving at the appropriate quality grade.

**GRADE AA DWELLINGS**

**GRADE AA DWELLINGS (Continued)**

## **GRADE A DWELLINGS**

This is a high-grade residence combining some of the special materials found in grade AA residences with some of the high-grade materials normally carried as stock items by building supply houses. Workmanship is of high quality throughout.

The quality of hardware, lighting fixtures, and plumbing fixtures will be of high-grade stock items with few special items such as bathroom fixtures or facings, or other features not found in good standard residential construction. In most instances, there will be some special features and built-ins over and above those found in the good grade houses but less elaborate in quality or quantity than those found in AA grade residences.

This type of residence is of custom design with some ornamentation and special effects evident in both the interior and exterior appointments. It has an above average number of good grade closets and storage areas of ample size. Appointments and features are a blend of those found in the upper range of good grade residences.

**GRADE A DWELLINGS**

**GRADE A DWELLINGS (Continued)**

## **GRADE B DWELLINGS**

This is a good grade residence which is constructed basically of good grade of standard stock items combined with good workmanship.

Special features in this type house normally consist of an extra quantity of cabinets, closets, counters, etc., which are constructed of good quality materials. The quality of hardware, lighting fixtures, and plumbing fixtures includes good standard stock items or it may include a combination of high-grade, good grade, and average grade appointments.

These houses may contain a limited number of special appointments contained in the Grade A residences, combined with some items of the quality found in the average grade residence so that the combination exceeds the quality and quantity of the average grade residence.

These residences are of good materials and workmanship. They may or may not have special design or ornamentation features.

**GRADE B DWELLINGS**

**GRADE B DWELLINGS (Continued)**

## **GRADE C DWELLINGS**

This is an average grade residence made of average quality materials and standard stock items. The workmanship is of professional quality. Interior features include an adequate number of cabinets, closets, counters, etc., constructed of average grade materials.

The quality and quantity of hardware, lighting fixtures, and plumbing fixtures will be the more widely used standard stock items available during the period of construction. This grade of dwelling will contain a number of electrical outlets adequate to meet consumer demand at the time of construction.

The exterior design and the floor plan are derived from basic plans furnished by the contractor or the buyer. In newer developments, the same architectural design may be repeated periodically throughout the development. This grade dwelling in new developments may be mass produced. The design, materials, and other features in this grade of dwelling are determined by the demands of the majority of home buyers and the requirements of mortgage lenders.

**GRADE C DWELLINGS**

**GRADE C DWELLINGS (Continued)**

## **GRADE D DWELLINGS**

Grade D includes those structures which utilize a less than average quality material and workmanship. Most are of plain or simple architectural design exhibiting few, if any, exterior innovations.

The interior features encompass only a minimum number of cabinets, counters, and closets. The cabinet work most often includes less expensive hardware and comes from stock items which may or may not be properly fitted to the space allowed for installation. The doors, windows, and wall trim are predominantly soft wood suitable for painting.

The quality and quantity of plumbing fixtures, lighting fixtures, door hardware, and window hardware are only adequate and are low cost stock items. The number of electrical outlets provided is strictly limited with few, if any, convenience outlets.

The exterior design and floor plan have only functional and necessary features. In some instances, the framing, flooring, interior wall finish, and exterior wall and roof coverings consist of substandard materials and workmanship.

The overall design, quality of materials, quality of labor, and the absence of frills provide only those basic requirements for shelter and compliance with existing building codes.

**GRADE D DWELLINGS**

**GRADE D DWELLINGS (Continued)**

## **GRADE E DWELLINGS**

Grade E dwellings are constructed with minimum quality material, minimum quality workmanship, and no extra design factors.

The interior features provide only the base necessities. Any cabinets or work counters provided are usually of a cheaply constructed “set in place” or homemade type and may or may not be fitted to space provided. The doors, windows, and wall trim are made of cheap, low quality material, and the quality of workmanship is below average.

The base minimum quality and quantity of plumbing fixtures, lighting fixtures, doors, windows, and hardware are provided. The number of electrical outlets is less than adequate with no convenience outlets.

The exterior design and interior floor plan are very plain. The rooms are generally small; closet space is very limited, and in some instances nonexistent. The framing, flooring, interior wall finish, exterior wall covering, and roof are of substandard materials and workmanship.

The overall design, quality of materials, quality of labor, and basic design are those which barely meet the minimum standards required by regulatory agencies for health, safety, and zoning ordinances.

## Real Property Valuation

The value of land and improvements and the loss in value of improvements, called depreciation, are in all cases dictated by the buying public or market. It is the appraiser's task to observe and analyze what the buying public has done and estimate what would occur as of the "appraisal date". The value of real property encompasses a promise of all the rights of ownership and amenities, which will be available to the buyer in the future. To a great extent, the value of real property derives from the anticipation of future benefits. The appraiser may only provide "an estimate, an opinion of value" as of a set date in time known as the "appraisal date". A valuation or "estimate of value" may be determined utilizing only information that existed in the market at the time of the "appraisal date". There are three distinct approaches to real value: **market (sales comparison), cost, and income**. It is up to the judgment and discretion of the appraiser to select and weigh the most appropriate approaches for a given property depending on its type and information or data available.

### Land Development Costs and Entrepreneurial Profit

The Tax Assessor's Office will record a cost approach model to display on all real property records in the County. The manuals, schedules and data from Marshall & Swift Valuation Services are used as the valuation schedules for the cost approach for commercial properties. An Income Approach may be recorded for classes of commercial properties that are typically bought or sold based on their income potential. The residential Cost Approach uses data observed through local builders, developers, material costs, and market research. A Market Approach (Sales Comparison) may be recorded on individual properties or market areas where the appraiser determines that there are adequate similar sale transactions available to produce accurate and equitable appraised values. Where multiple approaches are recorded, the appraiser must determine that most appropriate approach to be applied.

Cost values and the pertinent current and local multipliers are analyzed, modified, and supplemented as necessary to conform to information obtained directly from local contractors, developers, and others. This modified and supplemented cost data is then used by staff appraisers to determine the replacement cost new of all the real property improvements in the County. The replacement costs include what the *Marshall Valuation Service* manual identifies in Section 85 as, "Contractor's Overhead and Profit." However, it does not include entrepreneurial profit, which may vary according to the complexity and risk involved in the construction or investment and as determined by the prevailing market for the property. Other items that are not contained in the replacement costs are listed by *Marshall Valuation Service* in Section 1 and include land improvement costs such as storm drainage, rough grading, and other miscellaneous land development costs and fees.

In describing entrepreneurial profit, the Fourteenth Edition of *The Appraisal of Real Estate*, © 2013, (TARE) gives a definition as: "A market derived figure that represents the amount an entrepreneur receives for his or her contribution to a project and risk; the difference between the total cost of a property (cost of development) and its market value (property value after completion), which represents the entrepreneur's compensation for the risk and expertise associated with the development. An entrepreneur is motivated by the prospect of future value enhancement (i.e., the entrepreneurial incentive). An entrepreneur who successfully creates value through new development, expansion, renovation, or an innovative change of use is rewarded by entrepreneurial profit. Entrepreneurs may also fail and suffer losses." (Chapter

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

27, page 573) The TARE, further states, Entrepreneurial incentive is “The amount an entrepreneur expects to receive for his or her contribution to a project. Entrepreneurial incentive may be distinguished from entrepreneurial profit (often called developer’s profit) in that it is the expectation of future profit as opposed to the profit actually earned on a development or improvement.” (Chapter 27, page 573) Clearly, the replacement cost new of an apartment house, for example, will be the same whether there is a shortage of apartments or an oversupply. But a shortage will certainly enhance the market value of a desirable property. Thus, the staff appraisers must use their knowledge and judgment to determine the actual values of the properties they appraise. Physical, functional, and economic obsolescence will detract from their values; good entrepreneurial judgment and high demand will enhance value.

To quote from **Section 40** of the *Marshall Valuation Service\** manual, “**JUDGMENT IS THE BASIS OF ALL APPRAISING**”, since each cost or value is an estimate. The cost data in this manual are averages of actual costs, but it is necessary to select the proper cost and to recognize when the given cost must be modified up or down or a new cost developed. This judgment factor comes with study and experience and is necessary for reliable valuations. Non-standard structures or components must be recognized as such and should be appraised only by professional appraisers with the experience, judgment and data necessary to analyze the specific qualities of the structure. Any data source can only be a guide to the thought processes of the appraiser who, alone, is finally responsible for the finished estimate of cost or value.”

In any case, the assessment appraisal must reflect the market value (fee simple, unencumbered) of a property in the open market. Amounts may be added to the cost approach, as necessary, to reflect the estimated entrepreneurial contribution, or other miscellaneous development costs and fees applicable to the value of a particular property. An addition for entrepreneurial profit may be made through added amounts on the structures pricing ladder shown on each section on the property record. For entrepreneurial profit the amount added is not dependent on a particular occupancy, but would consider the type of development, construction, and location involved. Land development costs and fees not included in the building replacement costs are added to the land value by the estimate and use of base rates for improved land or sites. Thus, the calculation of the land value for an improved site contains typical extra development costs and fees. Land values for improved sites contain the value of storm drainage systems, utility connections or underground utilities, water and sewer connections, site grading, landscaping, surveying, legal and miscellaneous costs associated with the land development as appropriate.

Thus, entrepreneurial profit (when applicable) is contained in the improvement valuations, while site development costs and fees are contained in the land valuations.

\* *All references to Marshall Valuation Service manual are from July, 2020 Edition*

**Dwelling Value**

The value of a single-family dwelling is calculated from basic cost figures obtained by market analysis of recent sales and confirmed by information provided by local building contractors. This standard dwelling is a one-story, C Grade, frame structure with 1,400 square feet of living space. The basic cost (value) of construction of a standard dwelling has been established as \$84.00 per square foot.

**Improvement Valuation**

The relative costs of variations from the standard structure are expressed as percentages in the tables located in the Appendix for quality grade, dwelling size and construction type. It should be noted that the tables are *not* intended to be rigid or exact in application. No appraisal manual or cost schedule can be more than a guide to the appraiser. Where unique items exist, the appraiser will consider the actual cost information provided by the property owner, determine the appropriate value or cost to be used in the appraisal and perform any necessary calculations manually. The appraiser may utilize the descriptions and types established in the computer system and then apply a sound value override rate. The most common occurrences of these items are found in Commercial Additions Rate Tables (Page 213) and Commercial Miscellaneous Improvements Rate Table (Page 226) and are denoted with “Cost or SV Rate” in the description column of each table. If the subject real property is found to exceed the upper or lower limits of the cost schedules or to exceed the limits of the computer programming, it will be the appraiser’s task to determine the correct value or cost to be used in an appraisal and to perform any necessary calculations manually. In the final analysis, it is the appraiser who must use his judgment and discretion to determine the correct value of the subject property.

## Grading Interior and Exterior Dwelling Appurtenances

In determining the quality grade of a dwelling, the fireplace stacks and fireplaces and basement finished area are graded separately from the dwelling structure. The grades applicable to these items are G (good), A (average), and P (poor). The grade selected will reflect the quality of the interior item as compared to the quality grade of the dwelling structure.

### GRADING FIREPLACE STACKS AND FIREPLACES:

Fireplaces are a good example of the economic principle of substitution. The IAAO book, The Property Appraisal and Assessment Administration, defines substitution as “A principle stating that a property’s value tends to be set by the cost of acquiring an equally desirable substitute.” Historically the technology of masonry, woodburning, fireplaces was a critical feature of a home. The advent of high efficiency heating system, insulated metal flues, and gas logs make fireplaces more decorative than functional. Fireplaces will be graded accordingly.

Most traditional masonry fireplaces will be graded as Fireplace Avg as long as they are fully functional. If they are not fully functional, they will be graded as Fireplace Low Cost. Large decorative fireplaces with high detail or decorative in nature may require higher grades of Fireplace Good or Fireplace Excellent. Prefabricated fireplaces and flues always use Fireplace Low Cost.

### GRADING BASEMENT FINISHED AREA:

Finished basement type should be selected based on quality of the finished basement in relationship to the remainder of the dwelling and whether the basement has an above grade entrance.

BASEMENT FINISHED	
<b>BASEMENT-FIN-LC-NR</b>	Finished Basement Low Cost, HVAC Matching Base, Below Grade Entrance
<b>BASEMENT-FIN-AVG-NR</b>	Finished Basement Average, HVAC Matching Base, Below Grade Entrance
<b>BASEMENT-FIN-GOOD-NR</b>	Finished Basement Good, HVAC Matching Base, Below Grade Entrance
<b>BASEMENT-FIN-LC-R</b>	Finished Basement Low Cost, HVAC Matching Base, Above Grade Entrance
<b>BASEMENT-FIN-AVG-R</b>	Finished Basement Average, HVAC Matching Base, Above Grade Entrance
<b>BASEMENT-FIN-GOOD-R</b>	Finished Basement Good, HVAC Matching Base, Above Grade Entrance

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

Certain exterior appurtenances (appendages) are also selected based upon their quality of construction and finish in relationship to the remainder of the dwelling. These additions are included in the valuation model for Grade and Depreciation. These addition types are used to correct for quality of construction that is much higher or lower than the quality of construction for the primary dwelling. The typical grade for any of these items where the quality of construction and materials is typical for the quality of the residential property is Average. These items are as follows:

- ❖ Frame Deck
- ❖ Landing
- ❖ Patio
- ❖ Carport

The types available for these structures are G (good), A (average), and P (poor). The quality grade guides for these appendages are given below:

FRAME DECKS	
<b>Frame Deck Good</b>	The quality of construction and detail substantially exceeds the quality of the dwelling.
<b>Frame Deck Average</b>	Quality of construction and detail of the Frame Deck is similar in quality of the dwelling. Decks on high-quality homes should reflect their detail. Similarly, decks on low cost homes reflect a lower level of detail.
<b>Frame Deck Poor</b>	The quality of construction and detail is substantially lower than the dwelling.

LANDINGS	
<b>Landing Good</b>	The quality of construction and detail substantially exceeds the quality of the dwelling.
<b>Landing Average</b>	Quality of construction and detail of the Frame Deck is similar in quality of the dwelling. Decks on high-quality homes should reflect their detail. Similarly, decks on low cost home reflect a lower level of detail.
<b>Landing Poor</b>	The quality of construction and detail is substantially lower than the dwelling.

PATIOS	
<b>Patio Good</b>	The quality of construction and detail substantially exceeds the quality of the dwelling.
<b>Patio Average</b>	Quality of construction and detail of the Frame Deck is similar in quality of the dwelling. Decks on high-quality homes should reflect their detail. Similarly, Decks on low cost home reflect a lower level of detail.
<b>Patio Poor</b>	The quality of construction and detail is substantially lower than the dwelling.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

CARPORTS	
<b>Carport Good</b>	The quality of construction and detail substantially exceeds the quality of the dwelling.
<b>Carport Average</b>	Quality of construction and detail of the Frame Deck is similar in quality of the dwelling. Decks on high-quality homes should reflect their detail. Similarly, decks on low cost home reflect a lower level of detail.
<b>Carport Poor</b>	The quality of construction and detail is substantially lower than the dwelling.

Other exterior appurtenances (appendages) typically are built with the same quality of construction and finish as the remainder of the dwelling. Negative adjustments for quality of construction and finish are included in the functional obsolescence adjustment. These items include:

- ❖ Additions, whether living space, utility areas, or other.
- ❖ Porches, open or enclosed.
- ❖ Stoops, which are small porches without roof supports.
- ❖ Attached or built-in garages.

For additional information, refer to the *Residential Base Rate Table*, *Residential Number of Stories Adjustment Table*, and *Residential Additions and Deductions Adjustment Table* located in the Appendix.

## Intensive Use Structures

An Intensive Use Structure may be of any age, but its design and features will require intensive use of the hand labor of skilled craftsmen. Most of the structures in this classification are dwellings which have been restored to their original appearance based on actual plans, photographs, or other documentation of the original structure. They contain most modern amenities including such items as central air conditioning, kitchen built-ins, excellent plumbing fixtures, etc. Many of these properties have been designated Historic Properties.

### **BASE SPECIFICATIONS**

The base area of an extensive use dwelling is calculated from exterior measurements of the dwelling foundation. The base area includes the following items regardless of the quality grade of the structure:

- 1) The structure includes the footings and foundation (not basement), exterior walls, floor, and roof structures.
- 2) The interior of the structure includes finished floors or carpeting, finished ceilings and walls (both the interior of the exterior walls and the interior partition walls).
- 3) Electrical service includes wiring, lighting fixtures, and outlets.
- 4) Basic plumbing includes sewer and water connections with one three-fixture bath, one hot water heater, and one kitchen sink.
- 5) A central heating system is included; air conditioning is *not* included.
- 6) Any fireplaces and stacks are not included.

### **INTENSIVE DWELLING VALUE**

The square foot costs (values) for average quality intensive use structures are listed in the Residential Base Rates Table, the Residential Number of Stories Adjustment Table, and the Residential Additions and Deductions Adjustment Table, located in the Appendix.

## **Depreciation**

### **CAUSES OF DEPRECIATION**

Improvements to land, whatever their nature, tend to depreciate or lose value over time. There are three general causes of accrued depreciation: physical deterioration, functional obsolescence, and economic obsolescence. Ways of measuring these are as follows:

#### **PHYSICAL DETERIORATION**

Physical deterioration is loss in value due to wear and tear and the forces of nature. All structures suffer natural physical decay due to tension, friction, compression, and chemical changes in the composition of materials. Some causes of physical deterioration are normal use, neglect, infestation of insects, dry rot, moisture, and the elements. Maintenance can slow physical deterioration but not arrest it altogether.

Physical deterioration may be classified as curable or incurable. Curable physical deterioration occurs when the value added by a repair equals or exceeds the cost of repair. A prudent property owner would make such repairs, which correct conditions caused by deferred maintenance. Examples include a failed heat pump or compressor, leaky plumbing, broken windows, cracked paint or plaster, a worn-out floor covering, a leaking roof, and broken built-in features.

Incurable physical deterioration is that which, as of the date of the appraisal, is not economical to repair or replace, that is, the cost of repair exceeds the gain in value. Physical components that are not easily seen, such as the structural framework, foundation, subflooring, and ceiling structures, are more likely to suffer from incurable physical deterioration. Partially depreciated items, such as siding that does not yet need replacement, are usually treated in this category.

The classification of depreciation as curable or incurable will vary with the age and location of properties. Extensive renovations may be worth doing in an improving market area but may not be in a declining one. High demand for the location or desirability of the style or historical appearance may negate the applicability of normal accrued depreciation.

#### **FUNCTIONAL OBSOLESCENCE**

Functional obsolescence is loss in value due to inability of the structure to serve adequately its highest and best use, as of the appraisal date. Functional obsolescence results from changes in demand, design, and technology and can take the form of deficiency (for example, inadequate floor plan), need for modernization (for example, outmoded kitchen), or super adequacy (for example, overly high ceilings). In any case, buyers perceive a loss in utility; therefore, the price offered is lower due to reduced demand. Sometimes a deficiency in a single building component can affect the utility of the entire improvement. For example, the electrical system installed in an older house may be inadequate for today's energy demands.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

Functional obsolescence is also classified as either curable or incurable, depending on whether the cost to cure is economically justified as of the appraisal date. Examples of curable functional obsolescence include inadequate heating or cooling systems, old-fashioned bathroom and kitchen fixtures, a too-small hot water heater, too few electrical outlets per room, low-hanging pipes in commercial or industrial buildings, and the absence of a ventilating system. In these examples, the increase in value from correcting the problem usually exceeds the cost.

For deficiencies, curable functional obsolescence is measured by excess cost to cure--the difference in cost between adding the expected item to the existing structure and installing it in a new structure, as of the date of the appraisal. For example, if installing an air conditioning system in an existing structure costs \$12,000 and installing the same system in new construction costs \$9,000, the excess cost to cure is \$3,000. In general, the excess cost to cure reflects added labor costs to install the component in an existing structure.

Incurable functional obsolescence occurs when the cost of correcting the condition exceeds the increase in value. Examples include outmoded design, poor room arrangement, and inadequate column spacing in a warehouse.

Sometimes a structure can be functionally obsolete because of its location, for example, a large, custom-built house in a moderately priced market area or a small; or a low-quality house in a high-priced market area.

### **ECONOMIC OBSOLESCENCE**

Economic obsolescence, also called locational or external obsolescence, is loss in value as a result of impairment in desirability caused by factors outside the property's boundaries. Economic obsolescence may arise from changes in the highest and best use of a property due to market shifts or governmental actions. It may be the result of inadequate public services, lack of parking facilities in a retail business district, narrow streets and heavy traffic in a residential market area, or proximity to inharmonious industrial and commercial land use.

Economic obsolescence is seldom, if ever, curable, and the assessor measures its effect from market data. It is possible that a market area-wide obsolescence factor may already be recognized by the appraiser as a part of the analysis of the market area. Of course, an undesirable location can affect land as well as improvement values, but the effects should be separated because land value, calculated from the market, already reflects this influence.

## **METHODS OF ESTIMATING DEPRECIATION**

Sales analysis combined with field inspection is required for the analysis and measurement of accrued depreciation. The appraiser will observe and note all conditions that diminish utility, including economic obsolescence, and estimate their combined effect on market value.

Five methods are commonly used to measure depreciation in single-property appraisal: sales comparison, capitalization of income, overall age-life, engineering breakdown, and observed condition breakdown. The first two are considered indirect methods in that depreciation is deduced from an analysis of similar properties. The last three are considered direct methods because they are based on direct analysis of the subject property, relying on estimates of effective age and remaining economic life.

Although it may not always be necessary to distinguish and label different forms and causes of depreciation, it is essential to account for all depreciation. The depreciation estimate must be supported by current market data. Depreciation, like land value and replacement cost new, must be estimated anew each time a property is reappraised.

## **DEPRECIATION SCHEDULES**

The methods discussed above for estimating depreciation in single-property appraisals are usually too time-consuming for mass appraisal. In mass appraisal, depreciation is often estimated using depreciation schedules, which show the typical loss in value at various ages tempered or adjusted by the appraiser's observation of the property. By nature, such tables primarily recognize physical deterioration, so additional adjustments are required for any functional or economic obsolescence. Because various types of property depreciate at different rates, depreciation schedules need to be adjusted for different types of properties as well as different locations. While the tables are designed to fit the market, due to the rigidity of such predetermined depreciation tables, the County will derive proper depreciation amounts for each structure within the market area according to the market as evidenced by sales of similar properties.

The *Marshall Valuation Service* cost manual contains definitions and depreciation schedules that most closely reflect the County's position and use of depreciation. The concept of 'extended life' as defined in Section 97 of the *Marshall Valuation Service* manual was developed by their studies and forms the basis for their depreciation tables and generally conforms with the County's use of depreciation.

In examining the market sales in each appraisal market area, the appraiser will adjust the depreciations used according to their observation and judgment of the market. The sales ratios derived by the use of depreciation in establishing values in each market area, give feedback and proof as to the accuracy of its application. Thus, as the assessed valuations match the sales that have occurred in the market area and throughout the County, the appraiser's application of depreciation to the County's costing system is determined and calibrated by the market. The County in examining and valuing all the properties during a reappraisal is in a unique position to determine depreciations in this manner. This method is seen as an adaptation of the sales comparison method of deriving depreciation in a single property appraisal. From a mass

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

appraisal format the appraiser considers the universe of sales available or appropriate for comparison and the resulting sales ratios produced verifies the correctness of the depreciations used.

Thus, during the 2021 reappraisal, the appraiser will analyze each market area and will essentially conduct a “best fit analysis” on depreciation by examining the sales ratios produced by individual valuations in each market area.

Any depreciation method must be used with judgment of the market by the appraiser. Depreciation amounts set by mathematical formulas such as “*straight-line*” or “*age-life*” depreciation are not held as leading to accurate appraisals **without market support**. It is the appraiser’s task to determine both the nature and extent of depreciation suffered by a property so that the resulting assessed value reflects what the buying public will pay – the market value of the property.

## **Land Appraisals**

The purpose of this section is to describe the appraisal principles and techniques used to achieve a uniform market value appraisal of vacant land for residential, commercial, or industrial use. Recent sales of vacant land are identified through transfer documents and the Western Piedmont Multiple Listing Service. These sales are then documented and, as possible, confirmed. If these sales meet the qualification criteria of the North Carolina Department of Revenues, Ad Valorem Section, they are qualified as arm's length, open-market transactions. The qualified sales are then analyzed for market value information.

### **ANALYSIS**

The highest and best use of a parcel is the reasonable and probable use that supports the highest value as of the date of the appraisal. This use must be physically possible, financially feasible, and legally permissible. Therefore, zoning is a primary determinant whether a property's "highest and best use" and value will be used for residential, commercial, or industrial purposes. In addition, in analyzing recent sales within each appraisal market area, each of the following factors is considered and weighed. Any adjustments required by the following factors are made at the discretion of the appraiser. The appraiser will decide the amount of impact on value due to the various characteristics of each parcel. For example, topography problems or easements may have little or no impact on value if located at the rear of the parcel or in buffer areas.

### **Size**

Size plays a major role in determining the price at which a parcel of land will sell. If the parcel does not have access to County water and sewer, the value of small parcels depends greatly on Health Department regulations pertaining to septic systems and watersheds. Size factors may be applied by use of homesite, excess acreage, commercial and industrial land size adjustment tables. Adjustments may also be applied manually to individual tracts where market information indicates. Positive or negative adjustments are made as appropriate.

### **Location**

Location is a key factor in determining the market value of a parcel. However, the sales of land being analyzed are grouped by appraisal market areas so location factors are minimized. Nevertheless, the market may offer higher prices for property in or near economically active areas including subdivisions, shopping centers, traffic arteries, etc. Conversely, parcels near declining market areas or under the influence of other adverse conditions have lower values than standard parcels. Positive or negative adjustments are made as appropriate.

### **Road Frontage**

The market may indicate a relationship between the value of a parcel of land and the amount of usable road frontage. Positive or negative adjustments are made as appropriate.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

### **Topography**

Topography is the surface configuration of a tract of land. This may include ditches, gullies, steep banks, areas prone to flooding, etc. These items are usually, but not always, due to natural causes. Negative adjustments are made as appropriate.

### **Shape**

The shape of a parcel may render it less capable of being utilized as compared to a standard parcel. Negative adjustments are made as appropriate.

### **Access**

Direct access to a parcel of land from a public paved road is considered the standard. Parcels with access only from public gravel or dirt roads will have their values adjusted downward. Tracts that are accessible only by private drive or easement will be given a larger minus adjustment. Parcels inaccessible by road will be given a minus adjustment as applicable. Negative adjustments are made as appropriate.

### **Easement**

Easements may be surface, subsurface, or overhead easements. Negative adjustments are made as appropriate.

### **Utility**

Utility is a negative adjustment used to compensate for an undeveloped lot within a subdivision. This adjustment compensates for items like final grading, water and sewer connections. Negative adjustments are made as appropriate.

### **Non-Perk**

Failure to “perk” or meet the minimum requirements for the installation of a septic system can have a negative impact on the value of rural land if the property does not have access to public sewer. Negative adjustments are made as appropriate.

Arm’s length sales of vacant lots or tracts are primary sources of market value information, but when few similar or recent sales have been recorded, other techniques are used to arrive at current residential land values such as: abstraction, allocation, capitalization of ground rents, etc.

## **RESIDENTIAL LOT APPRAISALS**

### **New Subdivisions**

In new subdivisions, sale prices of vacant lots, construction costs, and sales prices of improved lots are not usually available to the appraiser. However, lot values can be determined even in those market areas where vacant land sales are restricted to contractors who are not required to pay market value. Such lots are typically discounted to the contractor who in turn agrees to market the homes they build through the developer's organization. Based on sales of vacant lots and sales of new homes including the lot and improvements in other new subdivisions, it is possible to determine a range of value allocated to land. This percentage of sales price may then be applied to sales prices of new homes in comparable market areas to get an estimate of the vacant lot value.

In addition, if there are not enough recent open market sales of vacant land in the subject subdivision, the appraiser can estimate lot values by using sales from a similar new subdivision or from earlier dates by adjusting the sales prices to account for the effects of any difference in location or time or both.

### **Established Subdivisions**

In established market areas where sales of vacant lots and new home sales are rare, the technique called *abstraction* is often used to determine the value of land. If all the value (replacement cost new, including builder's profit, etc.) of the improvements to land less any depreciation (see preceding section) is subtracted from the sale price of residential properties, the residual value must be the value of the land in the subject market area. To use this technique successfully, the improvements must be valued at the highest and best use of the land and any depreciation must be accounted for.

As in the case of new subdivisions, if there are not enough recent open market sales of vacant land in an established subdivision, the appraiser can estimate lot value by using sales from a similar subdivision or other location, adjusting the sales prices to account for the effects of any differences.

### **Condominium, Townhouse, and Cluster House Developments**

Although a deed for condominium ownership may not convey fee simple ownership of any land, the deed does convey a fractional, undivided ownership of all common area property, both land and improvements, (held in common with other owners in the same development). Similarly, owners of townhouses and cluster homes, who do have fee simple ownership of the land under their house, also own a fractional, undivided ownership of all common area property, both land and improvements (held in common with other owners in the same development). The land valuation of these parcels reflects the site's contribution to the total market value of the parcel. Thus, the land valuation component is not merely a mathematical formula based on a percentage of the total tract's square footage, or other measure, but is dependent on the market value of each parcel, including market value of all common areas and any premiums for this type of ownership. The land component valuation in this manner is based on the "principle of contribution", which according to the fourteenth edition of The Appraisal of Real Estate holds, "that the value of an individual component of a property is measured in terms of how much it contributes to the value of the property as a whole".

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

G.S. 105-277.8. Taxation of property of nonprofit homeowners' association.

(a) The value of real and personal property owned by a nonprofit homeowners' association shall be included in the appraisals of property owned by members of the association and shall not be assessed against the association if:

- (1) All property owned by the association is held for the use, benefit, and enjoyment of all members of the association equally;
- (2) Each member of the association has an irrevocable right to use and enjoy, on an equal basis, all property owned by the association, subject to any restrictions imposed by the instruments conveying the right or the rules, regulations, or bylaws of the association; and
- (3) Each irrevocable right to use and enjoy all property owned by the association is appurtenant to taxable real property owned by a member of the association.

The assessor may allocate the value of the association's property among the property of the association's members on any fair and reasonable basis.

(b) As used in this section, "nonprofit homeowners' association" means a homeowners' association as defined in 528(c) of the Internal Revenue Code. (1979, c. 686, s. 1; 1987, c. 130.)

### **COMMERCIAL LAND APPRAISALS**

Unlike typical residential properties, commercial properties vary widely in size, usage, and other factors. The land is normally valued by square foot or acreage. Zoning is also variable and a major factor in the valuation of commercial land. As commercial property is zoned to serve a specific function; the size and shape of the tract and the road frontage must be evaluated from that standpoint. The availability of utilities and access to transportation arteries are also critical to value.

While recent qualifying sales of similar vacant tracts are primary indications of market value, vacant commercial land may be valued by the capitalization of ground rents technique. Also, the income approach to value may be used to determine the value of improved parcels and by determining the replacement cost new of the improvements and any depreciation of those improvements, the land residual technique may be used to value the land.

The value of an isolated commercial parcel located in a rural area of the county is based on the value of comparable properties located in the nearest commercial market area, with appropriate adjustments for location and other parcel attributes.

### **INDUSTRIAL LAND APPRAISALS**

Industrial land is normally priced by the square foot or acreage. The best indications of the value of vacant land zoned for industrial use are recent sales of similar tracts.

### **SUMMARY**

In all cases, the best indications of the value of vacant land are recent open-market, arm's length sales of similar tracts. Other indications of value may be obtained through the use of the land residual, abstraction, allocation, capitalization-of-ground rents techniques; however, these methods require that the improvements be valued in accordance with the highest and best use of the land and any depreciation be accounted for.

## **Rural Acreage Appraisals**

The purpose of this section is to describe the appraisal principles and techniques used to achieve a uniform market value appraisal of rural land zoned for single family residences. By far, the largest market in rural Forsyth County is for tracts of twenty acres or less to be utilized as or developed into residential homesites. Each rural market area's sales are reviewed by the assigned appraiser to develop overall land rates for the market. Highest and best use along with size, topography, location, road access, septic system perking, and flooding are then considered for each parcel. Many of the tracts larger than twenty acres are purchased for residential development or as an investment.

Because of this increasing emphasis on the residential use of rural acreage tracts, it is extremely important that an appraisal technique be used which is accurate and consistent in application. In our opinion, the method described below will provide the best and most consistent indication of the market value of rural land tracts available for residential purposes.

### **THE METHOD**

Throughout the County, rural land sales information has been collected and confirmed where possible. This information was then analyzed to determine geographical areas of similar land prices and the current land price (Base Price per Acre) for an unimproved twenty-acre tract of land. By election, our appraisal system is based upon a theoretical twenty-acre tract of land with no positive or adverse factors. In analyzing recent sales within Market Areas, each of the following factors was considered and weighed.

#### **Size**

Size plays a major role in determining the per acre price at which a parcel of land will sell. Larger tracts will usually bring a lower price per acre while smaller tracts will usually command a higher price per acre. The value of small parcels depends greatly on Health Department regulations pertaining to septic systems. This relationship of parcel size to value has been detailed in the *Rural Acreage Adjustment Table*, located in the Appendix.

#### **Location**

Location is a key factor in determining the market value of a parcel. As noted above, however, the sales of rural land being analyzed are grouped by value and by market area both, so location factors are minimized. Nevertheless, the market offers higher prices for property in or near economically active areas including subdivisions, shopping centers, traffic arteries, etc. Conversely, parcels near declining market areas or under the influence of other adverse conditions have lower values than standard parcels. Positive or negative adjustments are made to reflect these location influences.

## **RURAL ACREAGE APPRAISALS (CONTINUED)**

### **Road Frontage**

The market may indicate a relationship between the value of a parcel of land and the amount of usable road frontage. Positive or negative adjustments are made as appropriate

### **Topography**

Topography is the surface configuration of a tract of land. This may include ditches, gullies, steep banks, areas prone to flooding, etc. These items are usually, but not always, due to natural causes. Negative adjustments are made as appropriate.

### **Shape**

The shape of a parcel may render it less capable of being utilized as compared to a standard parcel. Negative adjustments are made as appropriate.

### **Access**

Direct access to a parcel of land from a paved road is considered the standard. Parcels with access only from public gravel or dirt roads will have their values adjusted downward. Tracts that are accessible only by private drive or easement will be given a larger minus adjustment. Parcels inaccessible by road will be given a minus adjustment as applicable. Negative adjustments are made as appropriate.

### **Easement**

Easements may be surface, subsurface, or overhead easements. Negative adjustments are made as appropriate.

### **Non-Perk**

Failure to “perk” or meet the minimum requirements for the installation of a septic system can have a negative impact on the value of rural land if the property does not have access to public sewer. Negative adjustments are made as appropriate.

## **MARKET ANALYSIS OF RURAL LAND & RECOMMENDED BASE PRICES**

Each rural market area's sales are reviewed by the assigned appraiser to develop overall land rates for the market. Highest and best use along with size, topography, location, road access, septic system perking, and flooding are then considered for each parcel. The physical characteristics of the land are identified and reviewed through the County GIS system that provides orthophotography, flood maps, road centerlines, and topographical contours.

### **HOMESITE**

An acreage tract with a dwelling on it will have the value of a homesite included in the value of the tract. For tracts of one acre or less, the entire tract will be valued as a homesite. For tracts of more than one acre, one acre will be valued as a homesite for each dwelling or residence (including modular and mobile homes) on the tract up to the total acreage of the parcel. The value of a homesite has been established by the market. The value of vacant land has been established by the base price per acre analysis. A further study of utility costs (water and septic system) indicated that an additional \$11,000 was required to account for the cost of the utility system.

## **2021 Land Use-Value Schedule** **Major Land Resource Area 136 (Piedmont)**

Taxation on the basis of present-use value is authorized by North Carolina law for eligible land designated by use as agricultural, horticultural, or forestland. Section 105-277.7 of the General Statutes of North Carolina, as amended in 1985, establishes a nine-member Use-Value Advisory Board and directs it to annually submit a recommended use-value manual to the Department of Revenue. The contents of the manual, as well as guidelines for its development, are further specified in Section 105-289(a)(5) of these statutes.

The following schedule is taken directly from the 2021 Use-Value Manual, published in April of 2020. Forsyth County has adopted the schedule recommended by the Use-Value Advisory Board in the 1988, 1993, 1997, 2001, 2005, 2009, 2013, 2017, and 2021 reappraisals.

## **Cost and Market Approach**

The cost approach is based on the theory that the market value of an improved parcel can be estimated as the sum of the land or site value and the depreciated value of the improvements (replacement cost new less depreciation). The cost approach is based on the principle of substitution and requires estimates of land value, accrued depreciation, the current cost of constructing the improvements, and the addition of entrepreneurial profit, if any. The cost approach attempts to replicate the workings of the real estate market. The current cost of construction and cost of a site of equal utility represent the supply side of the market. Other components of the cost approach, such as depreciation, the price of substitutes, location, and other non-cost market adjustments, represent the demand side of the market. When these components are derived from the market, the cost approach may be characterized as a ‘hybrid’ cost-market approach.

In mass appraisal, the cost approach, if correctly applied and all elements of cost are recognized, provides stable, consistent estimates of value. The cost approach usually works best for newer buildings, which have less depreciation and more easily estimated construction costs. It is especially useful for appraisal of certain property types – such as industrial and special-purpose – for which sales and income data are often scarce. Even when values from the other approaches are used for assessments, calculation of the cost approach may be used as a check and support.

The County appraisers consider valid, arms-length sales during the reappraisal of each market area. In considering the sales ratios, and per square foot values of the sales while establishing the new valuations, the market approach to value is considered for each parcel. These statistics are also examined by property type, such as two-story frame dwellings or fast food restaurants during the reappraisal, and are retained for each appraisal market area.

## Income Approach

Income-producing real estate is typically viewed as an investment such as stocks and bonds. The investor perceives that there will be an income stream and/or an increase in equity value that will justify the investment. Since income-producing properties are principally purchased under these assumptions, the use of the cost and sales comparison approaches are secondary to the income approach.

The income approach provides an indication of what a prudent investor would pay for a given property based on an analysis of the potential income that the property would produce. Estimating the present value from income is called *capitalization*. The basic model for direct capitalization is in the form: **Value = Income/Rate**. The income is the estimate of annual net stabilized income. The rate is the capitalization rate appropriate for the subject property at the effective date of the appraisal. Direct capitalization uses a capitalization rate taken directly from the market by dividing the net income of a sale property by the sale price. It is the method most used for mass appraisal as it is easily understood, can be used consistently because few variables are used, and its components can be supported by market evidence.

The first step in analyzing income is the calculation of potential gross income. For direct capitalization this is the projected total earnings from the market rent of the property at one hundred percent occupancy for the next year after the appraisal date. Next, typical or stabilized vacancy and collection loss can be established considering recent occupancy levels of the subject property or similar, nearby properties, or through surveys of similar properties. The vacancy and collection loss allowances are subtracted from the potential gross income, and miscellaneous income is added. Miscellaneous income takes various forms depending on the property type. It may be forfeited deposits, interest on deposits, income from food and beverage, parking, laundry facilities, percentage rents, telephone service, etc. Potential gross income less vacancy and collection loss plus miscellaneous income equal effective gross income. From this figure a typical or stabilized operating expense allowance is deducted. The operating expenses allowance consists of expenditures for items that would be deducted from income during a typical or stabilized operating year. These amounts may be developed from source documents of the subject property, projections from data collected from similar properties, or standardized industry ratios. In mass appraisal, pass-through expenses are typically deducted from the owner's expense as they are paid by the tenant (net lease situation) and not included in potential gross income or in the actual or asking rents. In all cases the operating expense allowance must reflect effective and efficient operation of the property in a normal operating year.

Extraordinary expenses, capital improvements, depreciation, and debt service are not allowable operating expenses. "*Reserves for replacement*" is the name of an account established for the periodic replacement of short-lived items. To be accepted as an addition to the operating expenses, this account must exist in the operating documents of the subject property, in surveys of similar properties, or industry surveys of that property type. Also, to be used as an operating expense in direct capitalization, "reserves" must be used in the calculation or derivation of the capitalization rate from the sales of similar properties that will be used for valuing the subject. All data in regard to the income approach and operating expenses must be derived from the market. For "reserves", this would be an amount recognized by the market, not just a mathematical compilation of items that could be included in a "reserves" account. Surveys of

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

investors in income producing properties often show no consideration of “reserves” in direct capitalization or show use of only minimal amounts. Also, when using a “reserves for replacement” addition to the operating expense allowance, care must be taken to remove current expenditures for reserve items when analyzing financial or income and expense statements.

Real estate taxes are not used as an operating expense for ad valorem appraisals because the tax expense is directly related to the property’s market value, which is being determined by the appraisal. Two methods are commonly used to adjust the capitalization rate, when necessary, to account for real estate taxes when doing mass appraisals for tax assessment purposes. If real estate taxes have been included as an expense in the development of the overall capitalization rate of comparable sales, an estimated effective tax rate (for the next year, for each tax jurisdiction) may be added to the market-derived overall capitalization rate. Alternatively, in deriving the capitalization rates, real estate taxes can be taken out of the expenses of comparable sales, thus producing more net income and a higher overall capitalization rate.

When the owner typically will incur very little, if any, of the real estate tax expense, such as in long-term (or well occupied) net lease situations no adjustment to the capitalization rate is necessary. In many leases such as triple net and absolute net, the tenant is responsible for paying the real estate taxes.

*Effective gross income* less *operating expenses* equals *net operating income*. The net operating income is then divided by an appropriate capitalization rate for the subject property to estimate the value in direct capitalization. The capitalization rate can be derived from a variety of sources: comparable sale data provider companies, investor surveys, market sales, and data analysis by the appraiser. Like the other elements of income analysis, all elements of the capitalization rate must be based on market data relevant to the property type and market conditions at the effective date of the value estimate.

If yield capitalization or discounted cash flow is considered as an income approach technique, all assumptions must be based on prevailing market conditions and reasonable investor expectations tempered with reliable economic projections. To be considered and carry weight in the valuation decision, all other methods such as discounted cash flow, should have documented market support for the various economic factors used.

Other capitalization methods used for mass appraisal include gross rent multipliers and effective gross rent multipliers. These methods do not include or account for differences in operating expenses, so care must be taken to use comparable sales that have very similar long-term operating expense ratios, occupancy levels, and risk levels. These multipliers may be employed as sales comparison measures in the market approach to value.

The objective of any approach to value is to capture the prevailing “mood” of the market and simulate its activities. All markets are cyclical in nature, but the objective of the appraisal is to evaluate property of a given type using the current elements that determine investor behavior.

Forsyth County collects economic data from local, regional, and national sources. Local, commercial property owners, appraisers, brokers, commercial multiple listing services, and

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

commercial comparable sale data provider companies are primary sources for commercial economic information. The County has mailed over 3,400 questionnaires to owners of commercially improved properties seeking income and expense information which is used during the reappraisal. Commercial property owners, managers, brokers, appraisers and tenants are continuously contacted and interviewed to collect and verify economic data. Thus, capitalization rates, vacancy rates, and expense ratios are derived considering local market data.

Published local, regional and national commercial rate information is considered in establishing guidelines for commercial valuation. Among some of the published sources the County reviews in rate establishment are the following: Michael S. Clapp & Associates' **Winston-Salem Office and Shopping Center Surveys**, Triad Business Journal **Market Reports and Surveys**, **Real Data Apartment Market Research**, **Hotel Brokers International**, **Smith Travel Research**, RealtyRates.com **Investor Surveys**, Institute of Real Estate Management's **Income & Expense Analyst Reports**, National Association of Realtors **Quarterly Market Trends**, Marcus & Millichap's Research Reports, Commercial Real Estate Exchange (CREXI), Deloitte Development LLC, Cushman & Wakefield Market Reports, NAI **Piedmont Triad Market Reports**, C.B. Richard Ellis **Southeast Market Outlook**, Boulder Group, Kroll Bond Rating Agency, Morningstar **Asset Summary Reports**, National Investment Center for the **Senior Housing and Care Quarterly Reports**. Also reporting services such as LoopNet, CoStar and TREPP are used as important sources for asking rents, leasing information, operating income, capitalization rates, offering prices and sale prices.

One of the most widely accepted sources for commercial income rate information is the Price-Waterhouse-Coopers (PWC) Real Estate Investor Survey due to its regional and historical data charts. Another widely used source of income approach data is the RealtyRates.com Investor Surveys. RealtyRate.com is used by Standard and Poor's financial services and partners with Marshall & Swift Valuation Service in providing real estate information. Its information is taken from Class A and Class B properties on a nationwide basis and does not include "reserves for replacement". Both of these sources have been used and relied upon in the development of the following Commercial Rate Guide by the County.

The US Census Bureau publishes various statistics that may be referenced during our research. It ranks the Winston-Salem Metropolitan Area as the 87th largest metropolitan statistical area in the United States. Comparatively, the Greensboro-High Point Metropolitan Area is 75th, Durham-Chapel Hill is 92nd and Raleigh-Cary is 42nd.

The RealtyRates.com information is taken from Class A & B properties on a nationwide basis and does not include "reserves for replacement".

As with any guide some properties may lay outside the stated range. As such, the following is a guide only; each individual property is to be analyzed separately. The following table reflects factors as reported by the market participants and published reports. The County adjusts operating expense and capitalization rates for ad valorem taxation as previously described.

<b>Residual Cap:</b>	<b>5.50% - 20.00%</b>
<b>Expense Ratio:</b>	<b>5.00% - 60.00%</b>

*Note: Expense ratio is in terms of effective gross income and real estate taxes are included as operating expenses in gross lease situations. Expense ratios are for typical stabilized occupancy ranges. When applicable to the owner, real estate taxes are loaded to the capitalization rate, reducing the above operating expenses ratios for gross lease situations. Also, expenses are exclusive of reserves, TI's (tenant incentives), and leasing commissions. Low expense ratios may be experienced by absolute net or triple net lease situations. When tenants pay management and service fees above actual expense costs, the above expense ratios do not apply. Condominiums and other small commercial property investments may sell for premiums and exhibit low capitalization rates.*

## **Sales Comparison Approach**

The sales comparison approach compares important attributes between recently sold properties and the property being appraised in order to derive an estimate of market value. The property being appraised is referred to as the “subject”, and the specific sales used in the analysis are called the “comparable sales” or “comps”. It is important that the properties chosen as comparable sales have very similar attributes and characteristics to the subject property. Property attributes and characteristics for a residential property would typically include: location, dwelling size (SFLA), condition, land or site value, construction quality, bathroom counts (fixture counts), heating/cooling, basements, car storage, house additions (decks, porches, etc.), etc.

The sales comparison approach begins with the identification of the property to be appraised – the subject. Next, sales of properties that are similar to the subject’s style (conventional, modern, A-frame, etc.), story height, SFLA, and age are identified. Location is typically resolved in this selection process by limiting sale properties to the subject’s market area or similar market areas identified by statistical analysis or review by an appraiser. The comparable sales are then narrowed by their similarity to the subject. It is important to consider these items in narrowing down the initial search for comparable sales.

Once a group of similar sale properties are identified, each one is compared to the subject’s attributes. Where differences are determined, adjustments (in terms of dollars) are made to the comparable property’s sale price to account for differences between each comparable and the subject property. For example, if a comparable sale’s SFLA is superior to the subject’s, a negative or downward adjustment is made to the comparable for that attribute. If the comparable sale is inferior to the subject, a positive adjustment is made to the comparable. The adjustments for a given comparable are tallied, and the net adjustment is made to the comparable’s sales price.

This process continues until a minimum of three (and a maximum of five) comparables are selected and adjusted for each subject property appraised by the sales comparison approach. The resulting adjusted sales price for each comparable is considered and a sales comparison approach value is available for appraiser consideration.

The sales comparison approach is designed to estimate market value for a subject based on market derived adjustments to highly similar sale properties. The sales comparison approach is strongest when adjustments to each comparable sale are minimal. Forsyth’s current software capabilities enable the use of a mass sales comparison approach for income producing residential properties. Mass application of the sales comparison approach is limited to market areas of high homogeneity with adequate sales activity.

## Real and Personal Property

### G.S. 105-273. Definitions.

“Real property,” “real estate,” and “land” mean not only the land itself, but also buildings, structures, improvements, and permanent fixtures thereon, and all rights and privileges belonging or in any wise appertaining to the property.

Thus, what is not *real property* may be defined as *personal property*. The following list of real and personal property items, though not comprehensive or complete, may help clarify the distinction. It should be noted that the following list is to supply guidance for typical situations. When extraordinary levels of improvements exist, above what is normally found in the specifications of a particular property type, the extra items or amounts may be classified as personal property. Such extraordinary items or costs would not normally be included in standardized real estate improvement cost tables.

As of the year 2003 the following was added to the above Statute in regard to manufactured homes:

(13) d. A manufactured home as defined in G.S. 143-143.9(6), unless it is considered tangible personal property for failure to meet all of the following requirements:

1. It is a residential structure.
2. It has the moving hitch, wheels, and axles removed.
3. It is placed upon a permanent foundation either on land owned by the owner of the manufactured home or on land in which the owner of the manufactured home has a leasehold interest pursuant to a lease with a primary term of at least 20 years and G.S. 105-273 Page 3 the lease expressly provides for disposition of the manufactured home upon termination of the lease

## **Basic Formulas Used to Calculate Real Estate Elements**

1. **LAND:** Each tax record can have multiple land lines. A portion of land for the record may be priced on each of these lines. Each land line is determined by the way it is identified for pricing purposes. The land rate may be applied from the market area. Various (negative) land condition or (positive) influence factor adjustments for size, shape, location, topography, road frontage, access, or easements may be applied.

*NOTE: In all examples, rates and adjustments are hypothetical.*

*NOTE 2: All values are rounded to the nearest \$100*

- **FORMULA FOR BASIC LAND PRICING:**

- **Vacant Land**

$$\boxed{\text{Unit of land}} \times \boxed{\text{Rate}} \times \boxed{\text{Size Factor}} \times \boxed{\text{Land Adj.1 x LA2 x LA3...}} = \boxed{\text{Land Value}}$$

**EXAMPLE:** 1.00 acre x \$18,500 x (0.85 x 1.5) = \$23,600

**EXCEPTION #1: Multiple Land Lines** - On acreage tracts designated rural, an appropriate size factor is selected from a table. If the total acreage is spread over more than one land line, the acreages must be totaled and a size factor selected based on the total acreage. In these cases, the same size factor is applied to each acreage land line.

$$\boxed{\text{Unit of land}} \times \boxed{\text{Rate}} \times \boxed{\text{Size Factor}} \times \boxed{\text{Land Adj.1 x LA2 x LA3...}} = \boxed{\text{Land Value}}$$

**EXAMPLE:**

Line 1: 3.5 acres x \$18,500 x 1.31040 x (0.85 x 1.5) = \$108,182

Line 2: 2.0 acres x \$18,500 x 1.31040 x (0.85 x 1.5) = \$ 61,818

\$ 170,000

**EXCEPTION #2: Homesite values** - Homesite values are calculated using a homesite acreage rate. Homesites that are less than one acre are adjusted by a size factor from a table. A flat value (an estimated average cost of a well and septic system), referred to as a utility, is added as a separate land line in rural areas when a homesite exists on a tax record. This flat rate is the same for all homesites which are one acre or less. If a homesite is greater than one acre, the amount of acreage is multiplied by the flat amount that exists on the utility land line.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

### EXAMPLE #1: Homesite with Utility Landline Less than 1 acre

Unit of land	x	Homesite Rate	x	Size Factor	x	LA1 x LA2 ...	=	Land Value
Unit	x	Utility Rate	x	Size Factor	x	LA1 x LA2 ...	=	Utility Value
							Sum	Homesite Value

Line 1:	0.36 acres	x \$18,500	x 1.22739	x (1.00)	= \$ 8,174
Line 2:	1.00 units	x \$11,000	x 1.22739	x (1.00)	= \$ 13,500
					\$ 21,700

### EXAMPLE #2: Homesite with Utility Landline Equals 1.0 acres

Unit of land	x	Homesite Rate	x	Size Factor	x	LA1 x LA2 ...	=	Land Value
Unit	x	Utility Rate	x	Size Factor	x	LA1 x LA2 ...	=	Utility Value
							Sum	Homesite Value

Line 1:	1.00 acres	x \$ 7,500	x 1.00000	x (1.00)	= \$ 7,500
Line 2:	1.00 units	x \$11,000	x 1.00000	x (1.00)	= \$ 11,000
					\$ 18,500

### EXAMPLE #3: Homesite with Utility Landline & Excess Acreage

Unit of land	x	Homesite Rate	x	Size Factor	x	LA1 x LA2 ...	=	Land Value
Unit	x	Utility Rate	x	Size Factor	x	LA1 x LA2 ...	=	Utility Value
Unit of land	x	Acre Rate	x	Size Factor	x	LA1 x LA2 ...	=	Utility Value
							Sum	Total Value

Line 1:	1.00 acres	x \$ 7,500	x 1.00000	x (1.00)	= \$ 7,500
Line 2:	1.00 units	x \$11,000	x 1.00000	x (1.00)	= \$ 11,000
Line 3:	7.61 acres	x \$ 5,000	x 1.18945	x (1.20 x .70)	= \$ 38,000
					\$ 56,500

2. **RESIDENTIAL DWELLING:** The dwelling is priced by a base square footage rate applied to the square footage of all areas. Refinements are added to the model as dollar value. Some areas are priced by a percentage of the base square footage rate.

Refinements include bath fixtures, fireplaces, and heating/air conditioning. Refinements are summed and then added to the value of the Main Body of the dwelling before that total is multiplied by the dwelling grade and percentage complete. Each of the other miscellaneous dwelling area values are also multiplied by the grade and percentage

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

complete and totaled with the Main Body (which includes Refinements) to arrive at a total adjusted reconstruction cost new (RCN).

- FORMULA FOR THE SQFT VALUE OF A FRAME OR MASONRY CONSTRUCTION HOUSE:**

**Base area:**

$$\left( \left( \boxed{\text{Heated Living Area SQFT}} \times \left( \boxed{\text{Base Rate}} + \boxed{\text{Masonry/Frame Factor}} \right) + \boxed{\text{\# of Stories Factor}} \times \boxed{\text{Size Factor}} \right) + \boxed{\text{Refinements}} \right) + \boxed{\text{Grade Factor}} \times \boxed{\% \text{ Complete}} = \boxed{\text{HLA RCN Value}}$$

**EXAMPLE 1: Frame**

$$\left( (3024\text{sf} \times (\$84.00 + 0.00)) \times 0.921958 \times 0.952351 + \$21,170.00 \right) \times 1.40 \text{ (B+15)} \times 100\% = \$341,884$$

*NOTE: The dwelling size factor comes from tables listed within this Schedule of Values.*

**EXAMPLE 2: Masonry**

$$\left( (3024\text{sf} \times (\$84.00 + 5.88)) \times 0.921958 \times 0.952351 + \$21,170.00 \right) \times 1.40 \text{ (B+15)} \times 100\% = \$363,741$$

*NOTE: The masonry adjustment factor comes from a residential table listed within this Schedule of Values.*

- FORMULA FOR MISCELLANEOUS AREAS OF THE DWELLING [Basements, attics, upper story finishes, decks, porches, and other areas not considered to be part of the base (main body) of a dwelling]:**

Additions to the dwelling are calculated and added to the Main Body value (which includes Refinements) after each is multiplied by a grade adjustment and percentage complete. Additions (Addn) such as attached garages, decks, and porches are priced by a percentage of the base square footage rate.

**Additions:**

$$\boxed{\text{Area SQFT}} \times \boxed{\text{Res Base Rate}} \times \boxed{\text{Addition \%}} \times \boxed{\text{Grade}} \times \boxed{\% \text{ Complete}} = \boxed{\text{Addn RCN Value}}$$

**EXAMPLE:**

$$\text{(Frame Deck): } 209\text{sf} \times \$84.00 \times 25\% \times 1.40 \text{ (C+10)} \times 100\% = \$6,145$$

At this point, the flat item values of the Built-Ins (which include items such as electric garage doors, and basement car storage) will be added to the RCN. These values are given in the Dwelling Rate, Percentage, and Unit Values Table.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

### Built-Ins:

$$(\text{Built-In 1} \times \text{Units 1}) + (\text{Built-In} \times \text{Units 2}) + (\text{Built-In 3} \times \text{Units 3}) = \text{Blt-In RCN Value}$$

### EXAMPLE:

$$\$250 (\text{Garage Doors Electric}) \times 2 = \$500$$

After the Built-Ins are added to the Total Adjusted RCN, depreciation and market area factors may be applied to arrive at a total assessed value for a building.

- **FINAL FORMULA FOR RESIDENTIAL DWELLING:** Rounded to nearest \$100

$$(\text{HLA RCN Value} + \text{Addn RCN Value} + \text{Blt-In RCN Value}) \times [100\% - \text{Phy Dep \%}] \times [100\% - (\text{Functional Dep \%} - \text{Economic Dep \%})] \times \text{Market Area Factor} = \text{Value}$$

### EXAMPLE:

$$(\$356,726 + \$29,857 + \$4,650) \times (100 - 17\%) \times [100\% - (10\% + 20\%)] \times 1.00 = \$227,306$$

3. **COMMERCIAL COST MODEL BUILDING CALCULATE:** Commercial buildings are priced using cost tables derived from the Marshall Valuation Service Manual. The Base Square Foot Cost for given occupancy-construction quality comes from these tables.

A building may represent a monolithic structure made up of one or more sections, or a building may represent a monolithic structure which contains separate sections due to major additions having been constructed in various years after the completion of the original building. Where multiple buildings are identified as part of a monolithic structure, each of those buildings may have a unique depreciation factor and adjustments may be made to account for additional fire walls, individual shared walls or no walls at all.

Buildings may be divided by sections based on their type of use or wall heights. Where multiple buildings are identified as part of a monolithic structure, each of those buildings may have a unique depreciation factor and adjustments may be made to account for additional fire walls, individual shared walls or no walls at all. Multipliers are applied for story height variation, perimeter variation, number of stories variation, and local and current cost. In conjunction with the multipliers, each section may have additional adjustments to account for specific feature variations such as sprinklers, plumbing, electrical, partitions, flooring, etc.. The Base Rate plus or minus Base Rate Adjustments multiplied by base Rate Multipliers produces an Adjusted Base Rate. The Adjusted Base Rate is then multiplied by the SQFT of the section to produce the Area Value. The Local Multiplier is provided by CoreLogic/Marshall & Swift to adjust new construction costs and labor for our local markets.

• **FORMULA FOR ONE SECTION OF A COMMERCIAL BUILDING:**

**Building Section:**

$$\left( \boxed{\text{Base Rate}} + \boxed{\text{Base Rate Adjustments}} \right) \times \boxed{\text{Base Rate Multipliers}} = \boxed{\text{Adjusted Base Rate}}$$

$$\boxed{\text{Adjusted Base Rate}} \times \boxed{\text{SQFT}} = \boxed{\text{Area Value}}$$

$$\left( \boxed{\text{Area Value}} \times \boxed{\text{Local Multiplier}} \right) \times \boxed{\% \text{ Complete}} = \boxed{\text{Adj Replacement Cost New}}$$

$$\boxed{\text{Adj RCN}} \times \left( \boxed{100\% - \text{Phy Dep \%}} \right) = \boxed{\text{Depreciated Section Value}}$$

EXAMPLE:  $(\$55.38 + \$15.50) \times 1.01 = \$71.59$   
 $\$71.59 \times 138,045 = \$9,882,641.55$

$$(\$9,882,641.55 \times 0.90) \times 100\% = \$8,894,377.40$$

$$\$8,894,377.40 \times (100\% - 10\%) = \$8,004,940$$

After each section is priced all sections are added together and any building additions, flat, or vertical item values are added. Additions, flat, and vertical items include loading docks, decks, canopies, etc.

## Forsyth County 2021 Uniform Schedule of Values, Standards, and Rules

EXAMPLE: \$8,004,940 + \$30,000 (miscellaneous additional items) = \$8,034,900

After the total section + additions value is calculated, functional and economic depreciation factors may be applied. These relate to the condition and functionality of the building and the economic forces in the surrounding area.

$$\boxed{\text{Area (or Unit)}} \times \boxed{\text{Rate}} \times \boxed{\text{Grade}} \times (\boxed{100\%} \times \boxed{\text{Phys Dep \%}}) \times (\boxed{100\%} \times (\boxed{\text{Functional Dep \%}} + \boxed{\text{Econ Dep \%}})) \times \boxed{\text{Neighborhood Factor}} = \boxed{\text{Value}}$$

- **FINAL FORMULA FOR THE COMPLETE BUILDING:**

$$\boxed{\text{Depreciated Value}} \times (\boxed{100\%} \times (\boxed{\text{Functional Dep \%}} + \boxed{\text{Econ Dep \%}})) = \boxed{\text{Total Depreciated Value}}$$

$$\boxed{\text{Total Depreciated Value}} \times \boxed{\text{Market Area Factor}} = \boxed{\text{Building Total Assessed Value}}$$

EXAMPLE: \$8,034,940 x [(100% - (3% + 3%))] = \$7,552,844  
 \$7,552,844 x 1.00 = \$7,552,800

4. **MISCELLANEOUS IMPROVEMENTS PRICING:** These are items separate from the main structure. Many are low-valued. Examples are: Shed, detached garage, fence, etc. These items are selected from a list of types. They may be priced by square footage or a flat rate per unit.

- **FORMULA FOR MISCELLANEOUS IMPROVEMENTS:**

$$(\boxed{\text{SQFT}} \times \boxed{\text{Rate}} \times \boxed{\text{Grade}}) \times (\boxed{100\%} \times \boxed{\text{Phys Dep \%}}) \times (\boxed{100\%} \times (\boxed{\text{Functional Dep \%}} + \boxed{\text{Econ Dep \%}})) = \boxed{\text{Total Depreciated Value}}$$

EXAMPLE: 64sf x \$16.53 x 1.22 x 0.90 x 0.92 x 1.00 = \$1,100

*NOTE: The rate tables in the Appendix provide the values to be inserted in the preceding formulas.*

## **Appendices and Tables**

The following pages include appendices, tables and supporting documentation for the Schedule of Values.

## Market Areas

Market Areas as of July 23, 2020			
Market Areas change as properties are split, consolidated, rezoned and developed.			
Market Area ID	Market Area Description	Market Area Type	# of Parcels
10	CENTRAL BUSINESS DISTRICT # 1 - 7TH TO BROOKSTOWN AVE, MARSHALL TO CHESTNUT DOWNTOWN CENTRAL BUSINESS DISTRICT # 1	COMMERCIAL \ IND	497
11	PIEDMONT TRIAD RESEARCH PARK - PARK BOUNDARIES, NEAR INTERSECTIONS OF BUS 40, NC 52 & THIRD STREET	COMMERCIAL \ IND	159
12	CENTRAL BUSINESS DISTRICT # 2 - MARSHALL ST TO SPRING ST, 7TH ST TO BROOKSTOWN AVE	COMMERCIAL \ IND	321

*Note: The ranges displayed on these **COMPARABLE SALES ADJUSTMENTS TABLES** are representative of the final values that will be established during the final review process. The final calibration of the Sales Comparison Approach is the last process completed prior to publication of the values. Because it uses the actual sales of properties within the County to produce values of the subject properties, the values are subject to calibration until the last sales are reviewed and analyzed.*

## **Commercial Cost Valuation Tables**

### **Primary Structures**

Forsyth County adopts the CoreLogic/Marshall & Swift Valuation Service as the cost model for commercial buildings. The county utilizes both the hardcopy manual as well as an automated calculation system known as MSVPO. A copy of the manual will remain on display in the Tax Assessor's office until the end of the 2021 reappraisal cycle. Updates to the paper copy of the manual, as well as the MVSPPO rates, and the CAMA system will be frozen as of the July, 2020 release date.

Though this schedule is comprehensive, it still requires the judgement of the appraiser to analyze the market information and adjust factors like depreciation based on observations.

If there are any differences between the Marshall & Swift Manual and the MSVPO, the County will use the MSVPO rates.

Additions such as decks, docks, patios and pools are priced per the Commercial Additions Rate Table that follows.

Miscellaneous improvements such as pavement, fencing, outbuildings, and yard fixtures (lighting) are priced per the Commercial Miscellaneous Improvements Rate Table that follows.
